1. New Features in Minitab Model Ops 1.3

Increased Data Limits

This release increases both the scoring and stability limits to 10,000 data rows per deployment, per day.

Baseline Data Uploads

Model Ops now allows users to easily download baseline data from the Model Repository.

Software Update Banner

A new software banner announces new features and upgrades. The banner displays upon the opening of a new release and remains until closed.

2. Problems Resolved in Minitab Model Ops 1.3

The following issues are resolved in Minitab Model Ops 1.3.

- The application does not gracefully error when an API key is incorrect, invalid, or revoked. (243958)
- The Settings page, upon submission, can have an etag mismatch. (245820)
- Pausing a deployment while replays are being run can make deployment status out-of-sync. (228401)
- User license seat/cookie expiration has undesired workflow. (236134)
- Sending a scoring statement without acceptance language header causes a batch scoring crash. (245549)
- Stability Reports in Live not updating/becoming out of date. (251196)
- When a user on a Mac uses Safari or Chrome to send a model directly to Model Ops from MSSO, they can experience a white screen within iframe and can land on the deployments page. (253472)
